- Run the Game from MainGame class that extends JApplet.
- Note: super unlikely that this will happen, but if there are not four cards in one line, you should resize the windows so it displays fully. I test on all computers I can find and It works, but still just making sure.

Extra Features:
- Hint: Highlight first two and the users choose the last one.
- CustomButton: whenever you hover over a button, its color changes and when you click on it, its color also changes.
- Clock on the side panel of the program: it shows how much time has elapsed since the users started solitaire mode. It resets every time a new solitaire game is played. Doing this helps make our set game more competitive.
- Whenever the game is finished, It shows how much it took you to finish the game.
